Fair housing: describe the home and its surroundings only — never suggest a home suits a particular nationality or ethnicity.

Method: we locate the home from its address and use OpenStreetMap roads, buildings, water and facilities plus USGS elevation data to work out facing, street layout, slope and what's around, then apply commonly used Vastu and Feng Shui guidelines. Facing is estimated from the street side; confirm with a compass on site. For cultural interest only — not an appraisal or legal or investment advice.
